1, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,3),(4,-1),(6,0),(8,-2),(10,5). Then write the interpolated equation in the google form?

==========

2, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,-1),(4,-4),(6,-2),(8,1),(10,4). Then write the interpolated equation in the google form?

==========

3, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,-2),(4,4),(6,5),(8,-1),(10,0). Then write the interpolated equation in the google form?

==========

4, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-2),(4,0),(6,-4),(8,5),(10,-3). Then write the interpolated equation in the google form?

==========

5, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,3),(4,1),(6,-1),(8,-2),(10,2). Then write the interpolated equation in the google form?

==========

6, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,1),(4,4),(6,-2),(8,-4),(10,-3). Then write the interpolated equation in the google form?

==========

7, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,-4),(4,-3),(6,5),(8,-1),(10,3). Then write the interpolated equation in the google form?

==========

8, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,0),(4,-4),(6,-2),(8,1),(10,4). Then write the interpolated equation in the google form?

==========

9, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,-3),(4,-2),(6,1),(8,-4),(10,-1). Then write the interpolated equation in the google form?

==========

10, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,4),(4,2),(6,0),(8,5),(10,-2). Then write the interpolated equation in the google form?

==========

11, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,-2),(4,5),(6,1),(8,3),(10,0). Then write the interpolated equation in the google form?

==========

12, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-1),(4,-3),(6,5),(8,1),(10,3). Then write the interpolated equation in the google form?

==========

13, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-2),(4,0),(6,1),(8,-4),(10,-1). Then write the interpolated equation in the google form?

==========

14, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,-3),(4,-1),(6,4),(8,3),(10,5). Then write the interpolated equation in the google form?

==========

15, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,2),(4,-2),(6,-4),(8,-1),(10,3). Then write the interpolated equation in the google form?

==========

16, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,0),(4,-2),(6,-4),(8,5),(10,3). Then write the interpolated equation in the google form?

==========

17, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,4),(4,1),(6,2),(8,-4),(10,3). Then write the interpolated equation in the google form?

==========

18, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,1),(4,-1),(6,-4),(8,0),(10,-3). Then write the interpolated equation in the google form?

==========

19, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,-1),(4,0),(6,2),(8,5),(10,4). Then write the interpolated equation in the google form?

==========

20, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,4),(4,-2),(6,1),(8,-1),(10,3). Then write the interpolated equation in the google form?

==========

21, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,-3),(4,1),(6,-1),(8,5),(10,0). Then write the interpolated equation in the google form?

==========

22, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,4),(4,0),(6,3),(8,-2),(10,-3). Then write the interpolated equation in the google form?

==========

23, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,-1),(4,-
4),(6,0),(8,3),(10,-3). Then write the interpolated equation in the google form?

==========

24, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,3),(4,2),(6,0),(8,4),(10,-2). Then write the interpolated equation in the google form?

==========

25, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,5),(4,1),(6,-3),(8,0),(10,-2). Then write the interpolated equation in the google form?

==========

26, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,2),(4,0),(6,5),(8,-4),(10,4). Then write the interpolated equation in the google form?

==========

27, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-1),(4,0),(6,-2),(8,-4),(10,4). Then write the interpolated equation in the google form?

==========

28, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,2),(4,0),(6,-2),(8,1),(10,-3). Then write the interpolated equation in the google form?

==========

29, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,-3),(4,-2),(6,5),(8,1),(10,4). Then write the interpolated equation in the google form?

==========

30, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,0),(4,-
2),(6,1),(8,3),(10,-4). Then write the interpolated equation in the google form?

==========

31, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,-1),(4,2),(6,-4),(8,-3),(10,-2). Then write the interpolated equation in the google form?

==========

32, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,3),(4,4),(6,-2),(8,5),(10,-3). Then write the interpolated equation in the google form?

==========

33, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,3),(4,-
4),(6,-3),(8,5),(10,0). Then write the interpolated equation in the google form?

==========

34, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,-4),(4,5),(6,2),(8,-2),(10,1). Then write the interpolated equation in the google form?

==========

35, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-4),(4,0),(6,-2),(8,-1),(10,2). Then write the interpolated equation in the google form?

==========

36, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,4),(4,-1),(6,5),(8,3),(10,-4). Then write the interpolated equation in the google form?

==========

37, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,1),(4,-1),(6,-3),(8,3),(10,2). Then write the interpolated equation in the google form?

==========

38, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,-4),(4,2),(6,4),(8,3),(10,0). Then write the interpolated equation in the google form?

==========

39, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,3),(4,4),(6,1),(8,-1),(10,-3). Then write the interpolated equation in the google form?

==========

40, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,-1),(4,2),(6,5),(8,-2),(10,-4). Then write the interpolated equation in the google form?

==========

41, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,5),(4,-1),(6,1),(8,-2),(10,2). Then write the interpolated equation in the google form?

==========

42, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,0),(4,1),(6,-2),(8,-3),(10,-1). Then write the interpolated equation in the google form?

==========

43, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,-2),(4,-1),(6,3),(8,1),(10,0). Then write the interpolated equation in the google form?

==========

44, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,2),(4,-1),(6,5),(8,-4),(10,0). Then write the interpolated equation in the google form?

==========

45, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,5),(4,-2),(6,1),(8,2),(10,-1). Then write the interpolated equation in the google form?

==========

46, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,-4),(4,-3),(6,3),(8,1),(10,-1). Then write the interpolated equation in the google form?

==========

47, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,-2),(4,-4),(6,2),(8,-3),(10,0). Then write the interpolated equation in the google form?

==========

48, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,-4),(4,0),(6,-3),(8,1),(10,-1). Then write the interpolated equation in the google form?

==========

49, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,3),(4,1),(6,-4),(8,-3),(10,2). Then write the interpolated equation in the google form?

==========

50, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-3),(4,-
2),(6,-1),(8,3),(10,4). Then write the interpolated equation in the google form?

==========

51, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,1),(4,0),(6,-3),(8,5),(10,4). Then write the interpolated equation in the google form?

==========

52, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-1),(4,5),(6,-4),(8,-2),(10,2). Then write the interpolated equation in the google form?

==========

53, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,5),(4,-1),(6,2),(8,0),(10,3). Then write the interpolated equation in the google form?

==========

54, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,2),(4,5),(6,-3),(8,4),(10,0). Then write the interpolated equation in the google form?

==========

55, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,-4),(4,-2),(6,-3),(8,5),(10,-1). Then write the interpolated equation in the google form?

==========

56, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,3),(4,5),(6,4),(8,0),(10,-1). Then write the interpolated equation in the google form?

==========

57, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-3),(4,-4),(6,0),(8,3),(10,4). Then write the interpolated equation in the google form?

==========

58, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,-4),(4,4),(6,-3),(8,0),(10,2). Then write the interpolated equation in the google form?

==========

59, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,1),(4,-3),(6,-4),(8,-2),(10,5). Then write the interpolated equation in the google form?

==========

60, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-4),(4,0),(6,-2),(8,3),(10,4). Then write the interpolated equation in the google form?

==========

61, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,4),(4,-
4),(6,3),(8,2),(10,-3). Then write the interpolated equation in the google form?

==========

62, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,5),(4,-
3),(6,-1),(8,0),(10,4). Then write the interpolated equation in the google form?

==========

63, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,-1),(4,0),(6,5),(8,3),(10,2). Then write the interpolated equation in the google form?

==========

64, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,5),(4,0),(6,-1),(8,2),(10,1). Then write the interpolated equation in the google form?

==========

65, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,-3),(4,-2),(6,3),(8,0),(10,4). Then write the interpolated equation in the google form?

==========

66, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,0),(4,3),(6,1),(8,-1),(10,-3). Then write the interpolated equation in the google form?

==========

67, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,-3),(4,0),(6,4),(8,5),(10,3). Then write the interpolated equation in the google form?

==========

68, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,4),(4,-3),(6,-1),(8,3),(10,-2). Then write the interpolated equation in the google form?

==========

69, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,-2),(4,3),(6,1),(8,-1),(10,5). Then write the interpolated equation in the google form?

==========

70, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,2),(4,-4),(6,1),(8,3),(10,0). Then write the interpolated equation in the google form?

==========

71, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,-2),(4,3),(6,-4),(8,1),(10,2). Then write the interpolated equation in the google form?

==========

72, Name:
Use the method of Newton for divided differences to interpolate the following points. The points are,(2,3),(4,4),(6,1),(8,2),(10,-1). Then write the interpolated equation in the google form?

==========

73, Name:
Use the method of polynomial forward to interpolate the following points. The points are,(2,2),(4,-
3),(6,-2),(8,3),(10,1). Then write the interpolated equation in the google form?

==========

74, Name:
Use the method of Gauss forward to interpolate the following points. The points are,(2,2),(4,-
1),(6,4),(8,5),(10,-3). Then write the interpolated equation in the google form?

==========

75, Name:
Use the method of Gauss backward to interpolate the following points. The points are,(2,2),(4,0),(6,5),(8,1),(10,4). Then write the interpolated equation in the google form?

==========

76, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,-3),(4,2),(6,1),(8,-1),(10,5). Then write the interpolated equation in the google form?

==========

77, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,5),(4,0),(6,-3),(8,2),(10,-4). Then write the interpolated equation in the google form?

==========

78, Name:
Use the method of polynomial Backward to interpolate the following points. The points are,(2,-3),(4,-4),(6,1),(8,3),(10,0). Then write the interpolated equation in the google form?
==========
